To IMPCO OEM/AM Customers

MODEL J SERIES REGULATOR – EUROPEAN MARKETPLACE

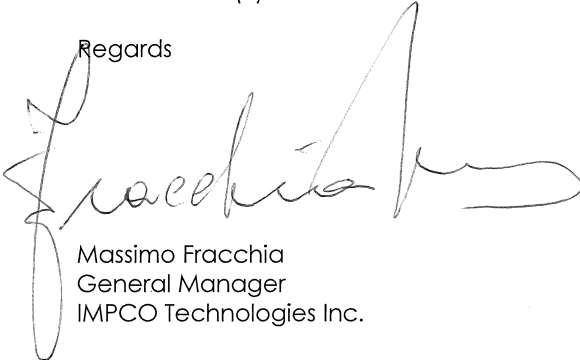

In mid-2000, IMPCO removed from direct offering all J series regulators from the European market as a voluntary measure in response to a specific request from German workplace agencies due to poor service by users and questionable applications practices by some installers.

Since that time, with the implementation through-out the European community, of the Machinery Directive (2006/42/EC) there now exists a formal process for technical assessment on all systems and subsystems incorporated in machinery. To make a formal conformity statement in line with the Machinery directive using the J series is no longer possible for machinery that is manufactured after January 1st, 2010, and the J series is no longer for service and repair in Europe by IMPCO.

IMPCO continues to directly support only the Cobra series regulator (which is a direct replacement for the J series) product in the European market for both production and all service use. As such IMPCO will support only Cobra product with formal declaration of conformity letters related to the use and application in the European market for compliance with the 2006/42/EC directive.

If more information is required please contact your local IMPCO representative, or our European Office at +31 (0) 15 274 25 50 or on the web at www.impcoco.eu.

Regards

Massimo Fracchia
